

Open Office Calc

Calc is the spreadsheet contained in Open Office. Open Office is a suite of programs including a word processor, a spreadsheet, a presentation capability, mathematical formula, and a drawing function. Calc is similar to pre 2007 version of MS Excel. The programme is free.

The look and functionality is similar to versions of MS Excel prior to version 2007. Compatibility is generally maintained but the more a Excel document is formatted the less will be carried over in a conversion to Calc.
