

Open Office Impress

Impress is the presentation programme contained in Open Office. Open Office is a suite of programs including a word processor, a spreadsheet, a presentation capability, mathematical formula, and a drawing function. Impress is similar to pre 2007 version of MS PowerPoint. The programme is free.

The look and functionality is similar to versions of MS PowerPoint prior to version 2007. Compatibility is generally maintained but the more a Powerpoint document is formatted the less will be carried over in a conversion to Impress.
